

A Steady and Effective Way to Make Money at the Roulette Wheel

Here is a slow and steady method that you can use at an online casino. It has the potential to be very effective but it is slow and will take patience. This method isn't advisable for land based casinos for two reasons. Firstly it involves note taking and keeping track of previous results and secondly it works on the principal that random number generation, used by casinos, has to appear random rather than be random. That is, it will spread the numbers out across the whole board more evenly than a real life casino roulette wheel might, this can be used to your advantage if you are clever and know what you are doing.

To be most effective in this method you need a pen and paper and some quiet.

First, if you observe the roulette table you will see that it's divided into three sections –first 1-12, second 13-24 and third 25-36. Whenever a spin is made you must take note of which section the ball lands in (first, second or third). After a while you will notice that the ball hasn't dropped in a particular section for a while. Keep observing and noting and when it hasn't landed in a particular section for seven spins in a row then it is time to bet. Take the smallest amount you can and place it on that section. A win here is paid at 2:1 (if you bet £1 you will get £2 back plus your original stake). If you win then take your winnings. Don't worry if you lose (the beauty of this method is that the betting structure makes sure that you always win back what you have already staked) simply increase your stake and bet on the same third again. Use the chart below to make your bets – keep increasing your stake if you lose and when you win go back to betting the smallest amount you can and repeat the procedure. Remember to keep track of where the ball lands whilst you are gambling as well! Seven times in a row has worked for me on numerous occasions but if you want to be more secure then wait until the ball has stay out of a section for eight or even nine spins.

Here is the stake chart to use:

Spin 8 -- £1

Spin 9 -- £2

Spin 10 -- £3

Spin 11 -- £4

Spin 12 -- £6

Spin 13 -- £9

Spin 14 -- £13

Spin 15 -- £20

Spin 16 -- £30

Spin 17 -- £45

Spin 18 -- £67

Spin 19 -- £100

If you're still a little sceptical then you can practice by following the link below.

Remember with gambling there will always be some risk involved. It's sensible to negate this risk as much as possible as with the above method but you can never eliminate it altogether. Never gamble with money you can't afford to lose.

You can practice here for free without spending anything [Cherry Red Casino](#). Cherry red is a world leader in online gaming. They accept players from all over the globe, including the USA.
